

We are the part of prestigious Green School Programme

MPS has initiated several good practices in its campus which has enabled it to carve a position for itself amongst the top ten schools of Delhi recognized as Green school gold model school.

The following practices in our school have fostered a multitude of positive environmental values amongst our teachers and students at par.

Zero waste generation: We are sensitized towards tremendous waste accumulation and difficulty in treating the waste efficiently. Hence we have adopted a zero waste policy in our school wherein every class generates minimum waste in their rooms, which is collected and disposed at the collection points by the students themselves.

Green and Blue bins concept: Our students are aware of segregation of biodegradable and non- biodegradable waste and their different methods of disposal. To conceive this idea efficiently we have green and blue bins at every waste collection points

Composting of waste: a well maintained compost pit facilitates composting of organic waste and plant residue to be naturally converted into manure instead of chemical fertilizers. This concept promotes the value of organic farming in school which is the need of the hour.

Recycling of paper: 'A tree saved is a life saved'. We cultivate the value to save paper in our school. Our students are sensitive towards deforestation and its consequence. We propagate recycling of used paper and generate paper to be consumed in school. It helps to minimize the need to purchase more paper from market.

Best out of waste: The paper pulp generated is converted into usable products such as file covers, book jackets and other materials to be used in art and craft. We also convert other types of solid waste into reusable items. This effort provides a platform to strengthen the concept of 3Rs- Reduce, Reuse and Recycle.

Herbal Garden- We have a small herbal garden 'Sanjivini' with more than 100 plants of medicinal importance. It is a storehouse to information on scientific name, common name and medicinal use of the plants. The idea enables us to develop a love amongst our students for herbalism which is essential for healthy life style.
